Definitions

• **Indigenous species** are native plants that occur naturally in the local area.

• **Environmental weeds** are plants that aggressively invade natural bushland and displace native flora and fauna.

• **Noxious weeds** are plant species declared under state legislation that cause environmental or economic harm or have the potential to cause such harm.

• **Naturalised species** are exotic or alien species that have established self-sustaining populations outside gardens, farms or plantations.

Photos: Thanks to Ian Moodie, and RG & FJ Richardson weedinfo.com.au
Environmental weeds pose the most significant threat to local biodiversity

Environmental weeds are plants that invade natural ecosystems such as bushlands, waterways and native grasslands. They may be native or introduced species and are often common garden plant ‘escapees’ that produce prolific seed and establish easily.

This booklet contains information on the most serious environmental weeds that are currently threatening local biodiversity. It includes descriptions and photos of each of the weeds, strategies for removing them and suggests a replacement species.

How environmental weeds affect local biodiversity

Environmental weeds compete with local plants for light, nutrients, water, space and pollinators. They can shade, smother, and crowd local plants, filling natural gaps that are required for native plant regeneration. They generally provide poor habitat for local wildlife.
Introduction

How weeds spread
Plants have evolved many specialised ways of successfully reproducing and spreading to ensure their establishment and survival.

Seeds can be carried large distances by animals, wind and water. Birds and animals eat fruit and seeds and disperse seeds over many kilometres. Sticky seeds and burrs caught in pet fur and on people’s clothes and shoes can be carried from gardens into bushland. Weed seeds can persist in the soil for many years and then germinate when conditions are just right.

Control and disposal
Accurate weed identification is critical to the appropriate control and disposal of weeds. The timing of treatment is also important to gain the best results. This brochure identifies suitable control and removal techniques for each of the respective weeds.

Weeds should be disposed of carefully. Some weeds can be composted, however those with long lived seeds, bulbs, and those that reproduce from stem fragments are not suitable for composting and should be placed in your green waste bin.
Introduction

Dumping of garden waste on roadsides or in parklands is illegal and can lead to new weed infestations.

To report dumping of green waste or rubbish please call Council on 9278 4444.

Bare ground — a magnet for weeds

When you have successfully removed a weed, it’s important to quickly replant and mulch in order to fill the empty space and inhibit weed regrowth. Indigenous plants make ideal replacements for weed species in the home garden or bush area. Some replacement species have been suggested in this brochure to assist your selection.

Sheet mulching can significantly reduce weed growth in your garden. After weeding, lay several layers of newspaper, cardboard or cotton sheets on the soil and then apply mulch. This will block light and prevent weed seeds germinating.
Weed control strategies

In the context of a home garden, most weeds can be managed without herbicides. Regular hand pulling, digging out of roots and tubers and suppressing weed growth by mulching garden beds, can work effectively. Keeping weeds ‘at bay’ requires ongoing vigilance and persistence!

Symbols used in the booklet

_manual removal_

Pull out small weeds or seedlings by hand. Remove larger weeds with a fork, spade or mattock including roots and rhizomes. Suitable for small or scattered weed infestations. Manually remove any time of the year.

_flower and fruit removal_

Flowers: cut off and dispose of spent flower heads before the seeds ripen and fall during seeding time. Fruit: cut off and dispose of fruit prior to maturity.

_solarise_

Use the heat of the sun to kill shallow rooted weeds by covering weeds with black plastic in summer.
Weed control strategies

- **Mow or brushcut**
  
  Remove flower heads using a mower or brushcutter before the seeds ripen and fall during seeding time. Suitable for grasses. Clean equipment to prevent weed spread.

- **Spray**
  
  Spray or paint diluted herbicide according to manufacturer’s directions directly on to leaves and stems when the plant is actively growing.

- **Cut & paint**
  
  Cut the stem at ground level and immediately apply herbicide to the cut surface with a paintbrush or eye-dropper. Suitable for “woody” weeds such as climbers, shrubs & trees. Cut and paint when plant is actively growing.

- **Drill & fill**
  
  Drill and fill small holes at regular spacing around the base of the trunk at a downward angle. Immediately apply herbicide directly into the holes as per the manufacturer’s directions. Suitable for “woody” weeds such as climbers, shrubs & trees. Drill and fill when plant is actively growing.
Tips for successful weed management

• Remove or treat weeds before they set seed or fruit.
• Pull weeds from the ground when soil is moist (i.e. after rain).
• When removing weeds by hand, begin at the outer edge of a weed infestation and work ‘in’ to reduce patch size.
• Begin weed removal efforts around plants that you value most.
• Mulch garden beds with organic mulch around 7-10cm in depth.

Use herbicides sparingly and with care

City of Boroondara staff and contractors use a variety of weed control strategies to reduce herbicide use where possible. These strategies include hand weeding, brush cutting, solarisation, burning and steaming. When herbicides are used, they are diluted to the lowest effective dose.

If you believe that herbicide use is warranted, please read the label carefully and follow instructions. If using herbicides:

• Cut back large creepers or woody shrubs and trees to reduce the bulk of plant growth then ‘cut and paint’ or ‘drill and fill’.
• Avoid using herbicides on plants that are stressed e.g. during periods of drought, as plants may not ‘take-up’ the chemical.
• Avoid spraying on windy days to prevent spray ‘drift’ onto nearby plants.
Weedy trees

× Box Elder (Acer negundo)

Removal/treatment

<table>
<thead>
<tr>
<th>Origin</th>
<th>North America</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flowering</td>
<td>Spring</td>
</tr>
<tr>
<td>Fruits/seeds</td>
<td>Summer-Autumn</td>
</tr>
<tr>

</tr>
</tbody>
</table>

• Hazel Pomaderris (Pomaderris aspera)
Weedy trees

**Broad-leafed Privet** *(Ligustrum lucidum)*

Large tree, shallow rooted. Glossy green leaves. Clusters of white flowers and black berries. Pollen linked to allergies.

<table>
<thead>
<tr>
<th>Origin</th>
<th>Asia</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flowering</td>
<td>Spring-Autumn</td>
</tr>
<tr>
<td>Fruits/seeds</td>
<td>Spring-Autumn</td>
</tr>
<tr>
<td>Spread by</td>
<td>Birds eat berries and spread seed. Also spreads by suckering.</td>
</tr>
</tbody>
</table>

Do not treat in hot weather. Before using drill-fill or cut-paint on stumps, peel away bark. Spray saplings <2m.

- **River Bottlebrush** *(Callistemon sieberi)*
Weedy trees

Desert Ash
(Fraxinus angustifolia)

Removal/treatment

Deciduous tree with bright green toothed leaves. Inconspicuous flowers that appear when tree is bare of leaves.

<table>
<thead>
<tr>
<th>Origin</th>
<th>Mediterranean and Western Asia</th>
</tr>
</thead>
<tbody>
<tr>

<td>and root suckers.</td>
</tr>
</tbody>
</table>

• Blackwood
(Acacia melanoxyylon)
Weedy trees

Sweet Pittosporum
(Pittosporum undulatum)

Removal/treatment

Large spreading native tree with creamy yellow flowers. Very common garden tree.

<table>
<thead>
<tr>
<th>Origin</th>
<th>Queensland, NSW, Eastern Victoria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flowering</td>
<td>Spring-Summer</td>

<td>Fruit eaten by blackbirds, currawongs, possums and foxes that then spread seed.</td>
</tr>
</tbody>
</table>

When seedlings emerge in autumn, they are easy to remove by hand. If using drill-fill method, clear soil from base and drill into the root crown. Treat in spring.

Golden Wattle
(Acacia pycnantha)
Weedy trees

**Tobacco Bush**  
*{Solunum mauritianum}*

**Removal/treatment**

Dense small tree. Leaves grey/green with soft hairs. Clusters of purple flowers turn to yellow berries.

**Origin**  
South America

**Flowering**  
Autumn-Spring

**Fruits/seeds**  
Spring-Autumn

**Spread by**  
Birds eat berries and spread seed.

Wear gloves when handling.

- **Lightwood Wattle**  
*Acaia implexa*
Cotoneaster - various forms
(Cotoneaster species)

**Removal/treatment**

Large woody shrub. Small white flowers turn to red berries.

<table>
<thead>
<tr>
<th>Origin</th>
<th>Asia</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flowering</td>
<td>October/November/December/January</td>
</tr>
<tr>

<td>February-August</td>
</tr>
<tr>
<td>Spread by</td>
<td>Birds eat berries and spread seeds.</td>
</tr>
</tbody>
</table>

Dig small seedlings. Treat before flowering.

- **Sweet Bursaria**
  
  *(Bursaria spinosa)*
Weedy shrubs

**Madeira Winter-cherry**  
*(Solanum pseudocapsicum)*

- Small shrub with yellow/red fruit that look similar to cherry tomatoes.
- **Origin**: Central/South America
- **Flowering**: Spring-Summer
- **Fruits/seeds**: Autumn
- **Spread by**: Birds eat berries and spread seeds.

---

- **Austral Indigo**  
  *(Indigofera australis)*
Mirror-bush
(Coprosma repens)

Removal/treatment

Large fast growing shrub with fleshy, shiny leaves. Small white flowers turn to orange berries.

Origin
New Zealand

Flowering
Spring-Summer

Fruits/seeds
Summer-Autumn

Spread by
Birds eat berries and spread seeds.

Treat before flowering.

• Prickly Currant Bush
(Coprosma quadrifida)
Weedy shrubs

Removal/treatment

Montpellier Broom
*(Genista monspessulana)*

Fast growing, woody shrub with yellow pea flowers. Hard brown seeds in pods.

<table>
<thead>
<tr>
<th>Origin</th>
<th>Africa, Southern Europe</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flowering</td>
<td>Spring</td>
</tr>
<tr>
<td>Fruits/seeds</td>
<td>Spring-Summer</td>
</tr>
<tr>
<td>Spread by</td>
<td>Seeds caught in animal fur and in soil and garden refuse.</td>
</tr>
</tbody>
</table>

• Gold Dust Wattle
*(Acacia acinacea)*
**Oyster Plant / Bear’s Breeches**
*(Acanthus mollis)*

**Removal/treatment**

Spreading plant with large glossy dark green leaves and white and purple flower spikes.

**Origin**  Europe, Africa

**Flowering**  Spring-Autumn

**Fruits/seeds**  Spring-Autumn

**Spread by**  Rhizomes beneath the ground.

Remove plant bulk before applying herbicide. Ongoing treatment needed.

---

**Tasman Flax Lily**
*(Dianella tasmanica)*
**Weedy creepers and climbers**

**Blue Periwinkle**  
*Vinca major*

*Removal/treatment*  
- Dark Green leaves and bluish purple flower. Low growing perennial creeper that forms dense mats on ground.

<table>
<thead>
<tr>
<th><strong>Origin</strong></th>
<th>Europe and North Africa</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Flowering</strong></td>
<td>Winter</td>
</tr>
<tr>
<td><strong>Fruits/seeds</strong></td>
<td>No seeds produced</td>
</tr>
<tr>
<td><strong>Spread by</strong></td>
<td>Stem runners.</td>
</tr>
</tbody>
</table>

Dig out seedlings. Spray when plants are actively growing in autumn and winter.

**Cut Leaf Daisy**  
*Brachyscome multifida*
Bridal Creeper
*(Asparagus asparagoides)*

**Removal/treatment**

Glossy green leaves and small greenish white, fragrant flowers. Small red berries.

<table>
<thead>
<tr>
<th><strong>Origin</strong></th>
<th>South Africa</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Flowering</strong></td>
<td>Spring</td>
</tr>
<tr>
<td><strong>Fruits/seeds</strong></td>
<td>Spring-Summer</td>
</tr>
<tr>
<td><strong>Spread by</strong></td>
<td>Birds eat berries and spread seeds.</td>
</tr>
</tbody>
</table>

Remove mat of tubers underground.

- Common Appleberry
  *(Billadiera scandens)*
Weedy creepers and climbers

× Cape Ivy/Ivy Groundsel
(Delairea odorata)

Removal/treatment

<table>
<thead>
<tr>
<th>Origin</th>
<th>South Africa</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flowering</td>
<td>Winter-Spring</td>
</tr>
<tr>
<td>Fruits/seeds</td>
<td>Spring</td>
</tr>
<tr>
<td>Spread by</td>
<td>Stem runners. Seeds dispersed by wind, water and animals.</td>
</tr>
</tbody>
</table>

Treat before flowering.

• Old Man’s Beard
(Clematis aristata)
Weedy creepers and climbers

Ivy/English Ivy (Hedera helix)

Climber and groundcover. Short aerial roots on stems adhere to climbing structures. Small yellow-green flower clusters.

<table>
<thead>
<tr>
<th>Origin</th>
<th>Europe</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flowering</td>
<td>Autumn-Winter</td>
</tr>
<tr>
<td>Fruits/seeds</td>
<td>Winter-Spring</td>
</tr>
<tr>
<td>Spread by</td>
<td>Birds eat berries and spread seeds. Also, stem runners and plant fragments.</td>
</tr>
</tbody>
</table>

Cut aerial growth to prevent seeding.

• Purple Coral-pea (Hardenbergia violacea)
Madeira Vine
(Anredera cordifolia)

Removal/treatment

Fleshy heart-shaped leaves. Fragrant white flowers in bunches.

Origin
South America

Flowering
Autumn-Summer

Fruits/seeds
Seeds not viable

Spread by
Underground tubers and aerial tubers (bulbils) that form on the stem then fall to the ground to form new plants.

Pick up bulbils from ground. Remove all of the roots.

Wonga Vine
(Pandorea pandorana)
**White Bladder-Flower/Moth Plant**  
(*Araujia sericifera*)

Twining, finely hairy stems with milky sap irritating to skin and eyes. Large pods split to reveal seeds with long silky hairs.

<table>
<thead>
<tr>
<th><strong>Origin</strong></th>
<th>South America</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Flowering</strong></td>
<td>Summer</td>
</tr>
<tr>
<td><strong>Fruits/seeds</strong></td>
<td>Summer-Autumn</td>
</tr>
<tr>
<td><strong>Spread by</strong></td>
<td>Wind</td>
</tr>
</tbody>
</table>

Remove and bag fruit. Follow up treatment necessary.

- **Common Appleberry**  
  (*Billardiera scandens*)
Weedy creepers and climbers

Morning Glory Vine
(Ipomoea indica)

Removal/treatment

Light green heart shaped leaves and large pink/purple flowers.

Origin
Central/South America

Flowering
Spring-Summer

Fruits/seeds
No viable seed

Spread by
Stem runner and plant fragments.

Vines can be severed at base and left to dry in canopy.

Purple Coral-pea
(Hardenbergia violacea)
Weedy creepers and climbers

X Wandring Creeper/Wandring Trad
(Tradescantia fluminensis)

Removal/treatment

Dark green glossy leaves and white flowers form thick mats that smother ground plants. Sap is an irritant for dogs.

<table>
<thead>
<tr>
<th>Origin</th>
<th>South America</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flowering</td>
<td>Spring-Summer</td>
</tr>
<tr>
<td>Fruits/seeds</td>
<td>No seed production.</td>
</tr>
<tr>
<td>Spread by</td>
<td>Stem runner and plant fragments.</td>
</tr>
</tbody>
</table>

If removing manually, ensure all stem fragments are removed.

• Creeping Boobialla
(Myporum parvifolium)
Weedy grasses and herbs

Angled Onion/Three-cornered Garlic
(Allium triquetrum)

Removal/treatment

Strap-like leaves growing from perennial bulb with white bell-shaped flowers. Strong onion/garlic smell.

<table>
<thead>
<tr>
<th>Origin</th>
<th>Africa and southern Europe</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flowering</td>
<td>Spring</td>
</tr>
<tr>
<td>Fruits/seeds</td>
<td>Spring-Summer</td>
</tr>
<tr>
<td>Spread by</td>
<td>Spreads by seeds and bulbs that persist in soil.</td>
</tr>
</tbody>
</table>

Best sprayed in winter and spring.

• Pale Flax Lily
(Dianella laevis)
Agapanthus  
(*Agapanthus praecox*)

**Removal/treatment**

Long strappy leaves and large purple or white flowers. Very hardy and popular garden plants but increasingly common in reserves.

<table>
<thead>
<tr>
<th><strong>Origin</strong></th>
<th>South Africa</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Flowering</strong></td>
<td>Spring-Summer</td>
</tr>
<tr>
<td><strong>Fruits/seeds</strong></td>

</tbody>
</table>

• **Rock Correa**
  
  
  (Correa glabra)
**Bulbil Watsonia**  
*(Watsonia meriana var. bulbillifera)*

**Removal/treatment**

Clumping plant with strappy leaves and slender reddish flowering stems 0.5m to 2m.

**Origin**  
South Africa

**Flowering**  
Spring-Summer

**Fruits/seeds**  
October, November, December

**Spread by**  
Underground corms produce new plants. Aerial tubers (bulbils) drop from the flower and sprout.

Hand pull corms in winter. Cut and paint before flowering.

• **Pale Flax Lily**  
*(Dianella laevis)*
**Weedy grasses and herbs**

**× Chilean Spear-grass/Serrated Tussock**
*(Nassella neesiana) + (Nassella tenuissima)*

**Removal/treatment**

Forms small tussocks. Young leaves are tightly rolled. Grass turns brown in winter. Produces purple florets.

**Origin**
South America

**Flowering**
Spring

**Fruits/seeds**
Spring-Summer

**Spread by**
Animals, on clothing, footwear, water and machinery

Dig out large tussocks, hand pull smaller plants.

**✓ Kangaroo Grass**
*(Themeda triandra)*
Weedy grasses and herbs

Cleavers Stickyweed
(Galium aparine)

Removal/treatment

An annual sticky scrambling herb with small white star-shaped flowers and small sticky seed pods.

<table>
<thead>

<td>Wind, water and in animal fur. Also spreads by rhizomes.</td>
</tr>
</tbody>
</table>

Plants are easy to dig out as rhizomes are shallow, but seeds persist in soil.

- **Sticky Everlasting** *(Xerochrysum viscosum)*
Pampas Lily-of-the-Valley
(Salpichroa origanifolia)

Oval leaves and small bell-shaped flowers and white/pale yellow berry. Low growing and creeping plant. Aerial shoots die in autumn and regrow in spring.

**Origin**  
South America

**Flowering**  
Spring-Autumn

**Fruits/seeds**  
Spring-Summer

**Spread by**  
Birds eat fruit and spread seeds. Also by root fragments.

Need follow-up treatment.

- **Old Man’s Beard**  
  (*Clematis aristata*)
